**Ref.: Babycalm Toxicological Evaluation and Clinical Trials**

To whom it may concern,

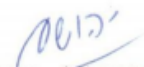

1. I hereby confirm that I have conducted a toxicological evaluation of the “Babycalm” product of Hisunit Ltd., and that the product is safe for use including infants below the age of 6 months, in the dosage prescribed on the product, which has been sold to this target audience for over 20 years. The product has a wide safety margin and does not pose any risk of poisoning or side effects. All the ingredients are listed on the GRAS list of the FDA as safe for use, as they are also according to the Israeli Ministry of Health.

2. As per the request of the Ministry of Health, and in accordance with the instructions of Dr. Rina Versano and Dr. Tal Lavi, Hisunit Ltd. is conducting a clinical study on the “Babycalm” product in cooperation with the Maccabi Health Services. Hisunit Ltd. will conduct this research under the coordination of Dr. Gerard Korchia and Dr. Lilach Gavish.

At this stage, we have completed preparing the clinical study protocol, and after preliminary meetings with representatives of Maccabi Healthcare Services in their offices in Tel Aviv-Jaffa, we are due to submit it to the Ethics Committee for approval in the coming days. This study will include about 100 infants and will represent a continuation of a study conducted in 2002 on 20 infants whose results encouraged the company Hisunit Ltd. to conduct a more thorough study.

Date of Statement: 29 May, 2019
